

# APEX Carbon Core

A new **cellular core** material for **high performance** structures.

## STRENGTH

The unique manufacturing process allows for high strength and modulus at low densities.

## RESILIENCE

The carbon fiber and epoxy combination resists moisture creating a stable structure in harsh environments

## FORMABILITY

The unique cellular geometry allows **APEX** core to conform to curved surfaces

- Designed to survive the toughest environments, **APEX Carbon Core** utilizes advanced high temperature materials oriented in a unique way to provide unchallenged performance.
- Utilizing an open weave carbon fabric creates natural cell to cell venting. No secondary perforation or slitting is needed.
- The carbon fiber enables drastically increased stiffness resulting in minimal deflection in the finished structure.
- **APEX** core resists water and corrosion in a way that Aramid and aluminum cores cannot.
- The near zero CTE makes **APEX** core perfect for precision structures subjected to a wide temperature range.

# Mechanical Properties

Examination or Test	Typical Result**	Test Method
Density	4.1 lb/ft <sup>3</sup>	ASTM C271
Glass Transition Temperature (DMA Tg)	428°F	ASTM D7028
Compression Strength*	541 psi	ASTM C365
Shear Strength*		
L-Direction	286 psi	ASTM C 273
W-Direction	161 psi	
Shear Modulus*		
L-Direction	46.4 ksi	ASTM C 273
W-Direction	13.2 ksi	
Water Absorption	1.20%	ASTM C 272
Max. Radius of Curvature*	5 inches	NA

\* Tested at 0.5-inch thickness

\*\*Properties are nominal and may differ for specific lots

**APEX** Carbon Core

## Size Chart and Geometry

Sheet Dimensions	Minimum (in)	Maximum (in)	Tolerance (in)
Thickness (T)	0.125	18	0.005
Length (L)	12	96	0.5
Width (W)	12	48	0.5

Manufactured by **Patz Materials and Technologies**
